

DiabloSport inTune i-1000 for 10-13 Camaro SS V8

What is the inTune?

The inTune is the all new successor for the Predator handheld tuner that you've come to know and love. The long tour of the Predator was an excellent one, but it has finally reached its home stretch making way for the inTune. The inTune has all of the famous preloaded tunes and available adjustments as the Predator, in a smaller, more advanced, and easier-to-use device!

inTune delivers an enhanced user experience with easy-to-understand menus controlled through a color touch screen, automatic USB updates via the internet (with no cable kits to buy!), and broad range of vehicle support coupled with a host of vehicle specific features, all at an incredibly affordable price. It's like no other flash tuning device available, offering all of the functions users want, and fits in your pocket!

Supported Applications:

- 2010-2013 Camaro SS
- 2012 Camaro ZL1

Available Tunes:

- 93 Octane "Diablotune"- +20 HP and 25 Ft/Lbs. TQ
- 91 Octane "Performance Tune"- +18 HP and 23 Ft/Lbs Tq
- Modified Stock Tune- Allows for stock HP with adjustability
- Custom Tunes Supported for all applications

Performance Programmer:

There is no setup required: simply plug the inTune into your vehicle's OBD-II port and select the tuning menu to automatically detect the ECU's calibration information. That will provide a list of available preloaded tunes to enhance both performance and economy. For example, on a 2011 Camaro SS, DiabloSport's preloaded tunes can improve power by 20 hp and 25 ft/lbs of torque with no other modifications necessary. As with all of DiabloSport's performance tunes, throttle response will be vastly improved (no more drive-by-wire lag!) and midrange power is increased.

Full Support for Custom Tuning:

This device can be fully custom tuned by a DiabloSport Dealer using our CMR Tuning software. Tunes can be created for any mix of aftermarket parts on your Camaro including Superchargers, Turbos, Larger Injectors and more. DiabloSport's CMR Tuning software suite allows dealers to effectively calibrate your Corvette for ANY aftermarket bolt on you have installed on the vehicle!

Data Logging:

The inTune offers users the ability to log and record information from the stock sensors in a numerical readout format, as well as additional input to log data read by an added aftermarket sensor, like a wideband O2 from such companies as AEM or PLX, an EGT sensor, and more.

Diagnostic Code Reader:

The handheld device can also be used as a diagnostic code reader. You can save hundreds of dollars each year by reading/clearing your own computer codes rather than paying a dealer to do the same. This function can be used to pull all engine-related trouble codes.

Automatic Online Updates with Mac compatibility:

Staying up to date with inTune couldn't be any easier: FREE updates come as downloads from the internet and load through our new Auto Updater with the included USB cable, requiring no software to install on your computer, and no additional purchases! This new technology means that sending a custom tune to the inTune is as simple as dragging and dropping it off the desktop of a Mac or PC. Updates can include improved tunes, new vehicle applications, better functionality and even new user interface enhancements.
