

#### **Type - Pivot Mount**

Pivot mounts relocate the upper control arms further outboard. This moves the top of the tire out for additional positive camber. Polyurethane bushings improve cornering and drag launch. Complete kit includes silicone grease, thread locking compound and all necessary hardware.

#### **Type - Ball Joint**

Adjustable upper ball joints feature offset mounting studs. Both positive or negative adjustments could be conveniently done by rotating the ball joints.

#### **Type - Mega Arm**

Revo's Mega Arm allows maximum adjustability while retaining the factory performance under heavy load. Constructed from high tempered steel and treated with an anti-corrosive coating. Revo's design evolves around ease of installment and adjustability.

#### **Type - Offset Bushing**

Polyurethane bushings and offset steel inserts replace the rubber upper control arm bushings. Camber adjustment could be achieved by rotating the steel inserts which moves the control arms.

#### **Type Cam Bolt**

Revo's Mega Cam utilizes factory specifications for their design with an added adjustable cam lobe to accurately correct the camber settings on a lowered vehicle. Also constructed from high tempered steel for added strength and precisely machined for perfect fitment.
