

DRILLING INTO VEHICLE IS REQUIRED!

1)

Start by removing the splash shield under the vehicle, on both sides, keeping all push pins and bolts for shield re-installation. Install brackets as per instruction sheet IN348. After brackets are installed and before installing board, hold splash shield up in place and make a mark on shield where each bracket is. You will have to cut a slit in the shield at each bracket location to install it back in place.

2)

After you reinstalled splash shield, install a self tapping screw on each side of the bracket where you cut a slit in the shield by the pinch weld.
